Smart Systems

The Company

Smart Architectural Aluminium is renowned in the fenestration industry for its ethos of quality in design and development. Our expertise and reputation is built from over 30 years experience in designing and supplying quality assured aluminium profile systems to the window and door industry. It is this experience and reputation for excellence that has made Smart Architectural Aluminium the UK's leading supplier of aluminium window and door systems.

Located in Yatton, North Somerset, at a purpose built 15,000sq/m offices and manufacturing plant the company has an annual turnover in excess of £30 million and employs over 100 people. In 2009 Smarts will complete development work on a further 15,000sq/m state of the art aluminium extrusion press and paint plant, the first to be built in the UK in over ten years.

As part of the international Corialis Group, Smarts are able to draw upon expertise from aluminium system companies in Belgium, France, Poland and China. Established in 1984 with its headquarters in Lokeren, Belgium, the Corialis Group has an annual turnover in excess of £250 million and employs 1300 people worldwide.

Smart Architectural Aluminium is committed to working towards a sustainable working environment, and to ensuring that every aspect of our activities is conducted in accordance with sound environmental practices.

The Product Range

The company has an extensive range of products which are held in bar lengths and are available ex-stock. The product range includes casement windows that are externally or internally beaded, open-in/open-out; other windows with various opening facilities i.e. tilt/turn, projecting, fully reversible, pivot, sliding and heavy duty; doors that are commercial hinged, commercial swing, patio, slide folding, multi-track slide and automatic; glazed screen/shopfront; curtain walling; roof glazing and conservatories. The products are available as thermal break or non-thermal break aluminium and aluminium/PVC-U composite. There is also a specifically designed thermally broken direct replacement for steel windows. It incorporates slim sightlines and an appearance inspired by the traditional old style steel window. It is ideal for listed buildings and replica refurbishment projects where planning constraints are to be considered.

Smart Thinking For Today's Markets

Design Expertise

Our team of technically competent designers use current CAD technology to produce innovative design solutions for specific markets.

Comprehensive technical manuals and data sheets giving full details of each system, including sections, components, drawings and fabrication details are available.

Assurance of Quality

Smart Systems is committed to high standards of quality and workmanship. In our view quality implies consistency, reliability and durability in terms of materials, product performance and service; quality equates with risk reduction – not just for our company but also for all our customers. It is for these reasons that we fully support independent certification and assessment schemes run by the BSI and BBA.

The Markets

Smart Systems offer a range of purpose designed products suitable for new buildings or refurbishment projects in the **architectural, commercial, public, new build and retail markets.**

Technical Sales

Our highly experienced team of Technical Sales personnel are available to assist and work closely with architects, specifiers, fabricators and installers on projects from inception of design through to fabrication and installation.

Training Facilities

The company has a designated workshop/training facility where product training is offered to its fabricators and other relevant individuals engaged within the industry. Smart Systems currently offer training courses to NVQ Standards.

National Distribution Service

Smart Systems has a national distribution service with its own dedicated transport fleet of lorries making daily deliveries to its network of reputable fabricators and installers throughout the United Kingdom.

Smart Systems are BS EN ISO 9001:2000 registered.

Environmental Policy

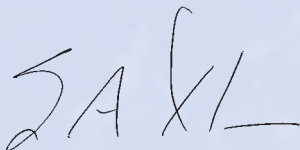

Smart Systems are committed to working towards a greener working environment and to ensuring that every aspect of our activities is conducted in accordance with sound environmental practices.

We plan to achieve this by:

- Minimising the consumption of natural resources and energy, whilst consuming material goods in moderation. We are resolved to use aluminium billets containing 30% re-cycled aluminium in our extrusion presses. Globally this will assist in reducing the demand for energy as the recycling process for aluminium requires only 5% of the energy necessary to create primary aluminium
- Reducing the creation of waste through the adoption of improved operating practices and by the recycling of materials whenever practical. By bringing our entire production all under one roof and by investing in on-site extrusion, painting and rolling facilities we aim to reduce the journeys our transport fleet make by 500,000 miles per year. We have instigated company wide recycling initiatives for all waste paper, cans and plastic
- Investing in the development of new products and modern processes/production facilities that have an improved performance regarding their impact on the environment. This means using the most efficient technology available thus enabling us to reduce wastage and cut out harmful industrial emissions
- Making sure that all waste and effluent is disposed of in a safe and responsible manner
- Ensuring that our company complies with environmental legislation
- Monitoring our progress towards the achievement of our aims for a greener working environment

Our objective is to promote among our staff, customers, suppliers and stakeholders an understanding of environmental issues in the context of our business. Our common task is to ensure that we continually improve the environmental impact of our total global activities.

This policy is recognition, by the company, of its responsibility towards safeguarding the environment and we publish this statement as a commitment by both management and employees to minimising the environmental impact of its operations.

E. Robinson
Managing Director

The **MC Wall** is a curtain wall system designed to create a dramatic but practical façade, with the option of sloped and facet-shaped glazing whilst allowing maximum light into small or large multi-storey buildings. Rapid on-site installation and concealed transoms, for seamless/uninterrupted glass to glass joints, are among the many special features of this versatile polyamide thermal break system. The system incorporates a top hung frameless vent and also accommodates all Smarts windows, doors and horizontal sliders.

CURTAIN WALL

MC Wall

Horizontal Section

Vertical Section

Trade Name	MC Wall
Building applications	Suitable for small and large multi-storey office buildings. Mullion and transom depths to suit design construction and structural requirements. Sloped glazing possible, straight and slightly facet-shaped vertical glass walls
Special features	Rapid on-site installation using stainless steel pin joints to connect transoms to mullions. Transom profiles have dedicated polyamide thermal break. Concealed transoms thereby giving glass to glass joints
Materials	Aluminium alloy 6060/6063 T5/T6 in condition F22 to NBN P21-001 and DIN 1725 Co-extruded profiles to DIN 7863, TV 110 NFP 85301, ISO 3994 Thermal break: polyamide strips PA 6.6. 25% reinforced with glass fibre Seals: EPDM to DIN 7863, TV 110 NFP 85301, ISO 3994
Finish	Polyester powder coat to BS 6496/APA-Qualicoat Guidelines. Anodised satin or bronze colours with EWAA/EURAS-Qualinod quality label Dual colour available
Profile width	55mm
Depth of frame	79mm – 250mm
Glass	Glazing options from 24mm to 33mm and single glazing
Sash inserts	MC Wall top hung frameless vent. Accommodates all Smarts windows, doors and horizontal sliders.
Weather performance	Tests conducted in accordance with STS 52.0 Complies with Doc. L for thermal transmittance Passed CWCT standard Test Report available on request

SC Frame is a curtain wall system designed to provide optimum thermal performance and rapid on-site installation, facilitated by the ladder frame method of construction, i.e. pre-assembled in sections during fabrication. SC Frame is suitable for use in low to medium rise facades, such as large shop fronts and showrooms where the application demands an attractive glazing system that delivers maximum glass area and ingress of light. The system will accommodate a wide range of Smarts windows and entrance doors.

CURTAIN WALL

SC Frame

Horizontal Section

Vertical Section

Trade Name	SC Frame
Building applications	Suitable for low to medium rise façades including large shopfronts and showrooms, where ease of installing large panes of glass is a pre-requisite.
Special features	Constructed in ladder frames in the factory allowing rapid on-site installation. Stainless steel self-tapping screws are used through the mullion into integral cores within the transom or a cleating method can be used for manufacture.
Materials	Aluminium alloy 6060/6063 T5/T6 in condition F22 to NBN P21-001 and DIN 1725 Thermal break and seals: EPDM to DIN 7863, TV 110 NFP 85301, ISO 3994
Finish	Polyester powder coat to BS 6496/APA-Qualicoat Guidelines. Anodised satin or bronze colours with EWAA/EURAS-Qualinod quality label Dual colour available
Profile width	55mm
Depth of frame	75mm, 100mm and 125mm
Glass	Single glazing 6mm, 10mm and 12mm and double glazing 24mm, 28mm and 32mm
Sash inserts	Accommodates Smarts Intruder, Alitherm, Visoline and Slide Windows and Doors.
Performance	Complies with Doc. L for thermal transmittance

Our Shopfront system Shopline is specifically designed for all ground floor treatments and severe duty doors. It is stylish, practical and accommodates all Smarts windows and horizontal sliders. It offers various sightline options to the head, midrail and cill detail as well as anti finger-trap stiles and concealed transom closers.

The versatility of the system is amply demonstrated by the variety of installations depicted in this brochure. Designed to be robust, our shopfront system will withstand heavy traffic in commercial buildings such as high street shops/store, office buildings, health clubs and many others.

Finish	Polyester powder coat to BS 6496/APA-Qualicoat Guidelines. Anodised satin or bronze colours with EWAA/EURAS-Qualinod quality label
Profile width	50mm
Depth of frame	100mm
Glass	Single glazing profiles accommodate 6mm - 12mm glass Double glazing profiles accommodate 24mm - 28mm glass
Sash inserts	Accommodates all Smarts windows and horizontal sliders.
Performance	Complies with Doc. L for thermal transmittance

This system was specifically designed as a thermally broken direct replacement for steel windows. It incorporates slim sightlines and an appearance inspired by the traditional old style steel window. It is ideal for listed buildings and replica refurbishment projects where planning constraints are to be considered.

The Evolution system is designed to be built as a series of horizontal modules which can be stacked using horizontal couplers and provides an ideal solution where there is a requirement for a prestigious and thermally advanced window system.

Performance

Weather tested in accordance with BS6375 Pts 1 & 2. Complies with Doc. L for thermal transmittance

Innovative designs and a comprehensive range of windows suitable for the architectural, commercial, public, new build and retail markets are hallmarks of Smart Systems.

Our window ranges include casements (top/side hung, fixed lights and any combination of these), tilt and turn, hopper, tilt and slide, projecting, fully reversible, pivot (horizontal or vertical), sliding and heavy duty. Windows are available externally or internally beaded, open-in/open-out, with polyamide thermal barrier or as an aluminium/PVC-U composite frame for high performance thermal efficiency. High security glazing, shoot-bolt locking, dual colour options, excellent weather performance (BS6375 Pts 1 & 2), compliance with BS7950 and a choice of ovolo, chamfered or square main profiles are just some of the many special features of our window systems.

Our Visofold folding doors are constructed from profiles with a thermal break. Robust sections enable the creation of large passage-ways providing maximum natural light and panoramic views. Moveable panels that can be folded up to the left or right sit within an outerframe. The system offers flexibility in terms of the possible combinations of folding elements and opening sashes.

This door system can be used in a variety of properties including private domestic dwellings, conservatories, hotels, restaurants and stores to open up a complete wall to create a larger space particularly advantageous in the summer.

Various options depending on design considerations

Outer frame 75 mm, sash 84 mm

Glazing from 21 up to 61 mm

Tests conducted in accordance with STS 52.0
Complies with Doc. L for thermal transmittance
Test Report available on request

Triline Window

Designed for use as fixed lights, tilt and turn, single or double sash, side hung (open in/out), tilt in, side or top hung (open out), horizontal or vertical pivot and tilt and slide windows. All options are internally beaded for use on domestic and all commercial applications

All applications are internally glazed with square or round edge beads
Polyamide thermal break allowing dual colour option
Profiles span full height i.e. floor to ceiling

Aluminium alloy 6060/6063 T5/T6 in condition F22 to NBN P21-001 and DIN 1725

Thermal break: polyamide strips PA 6.6. 25% reinforced with glass fibre

Seals: EPDM to DIN 7863, TV 110 NFP 85301, ISO 3994

Polyester powder coat to BS 6496/APA-Qualicoat Guidelines.
Anodised satin or bronze colours with EWAA/EURAS-Qualinod quality label
Dual colour available

Various options depending on design considerations

51mm

Glazing options from 4mm to 38mm

See "Building Applications" above

Tested to NEN-norm 5096. Security tested by SKG
Complies with Doc. L for thermal transmittance
Test Reports are available on request

Superglide Door

Designed to separate terrace areas and living quarters in houses and flats. Provides separations for conservatories looking out onto the garden and also creates space in passage-ways.

Thermal break system for patio doors (2, 3, 4 & 6 pane) and windows with thermal break

Aluminium Alloy 6060/6063 T5 in condition F22 (according to NBN P21-001 and DIN 1725)

Sealings: EPDM according to DIN 7863, TV 110, NFP 85301, ISO 3994

Thermal break: polyamide strips PA 6.6.25% reinforced with glass fibre

Polyester powder coat to BS 6496/APA-Qualicoat Guidelines. Anodised satin or bronze colours with EWAA/EURAS-Qualinod quality label. Dual colour available. Wood-effect colour available (powder coated according to Qualicoat)

Various options depending on design considerations

Outer frame 116 mm

Glazing from 4 to 38 mm

Tests conducted in accordance with STS 52.0
Complies with Doc. L for thermal transmittance
Test Report available on request

SC Frame

Suitable for low to medium rise façades including large shopfronts and showrooms, where ease of installing large panes of glass is a pre-requisite.

Constructed in ladder frames in the factory allowing rapid on-site installation. Stainless steel self-tapping screws are used through the mullion into integral cores within the transom or a cleating method can be used for manufacture

Aluminium alloy 6060/6063 T5/T6 in condition F22 to NBN P21-001 and DIN 1725

Thermal break and seals: EPDM to DIN 7863, TV 110 NFP 85301, ISO 3994

Polyester powder coat to BS 6496/APA-Qualicoat Guidelines. Anodised satin or bronze colours with EWAA/EURAS-Qualinod quality label. Dual colour available

55mm

7.5mm, 100mm and 125mm

Single glazing 6mm, 10mm and 12mm and double glazing 24mm, 28mm and 32mm

Accommodates Smarts Intruder, Alitherm, Visoline and Slide Windows and Doors.

Complies with Doc. L for thermal transmittance
